TOXICOLOGY

CONTENTS

Volume 47 (1987)

16th Conference on Environmental Toxicology

Preface
by D.E. Gardner 1

Interspecies extrapolations in risk analysis
by C.C. Travis (Oak Ridge, TN) 3–13

Toxicological studies of chemical mixtures of environmental concern at the National Toxicology Program: Health effects of groundwater contaminants
by R.S.H. Yang and E.J. Rauckman (Research Triangle Park, NC) 15–34

Tri-*n*-butyltin: A membrane toxicant
by B.H. Gray, M. Porvaznik, C. Flemming and L.H. Lee (Bethesda, MD and Dayton, OH) 35–54

The biological exposure index: Its use in assessing chemical exposures in the workplace
by L.K. Lowry (Cincinnati, OH) 55–69

In vitro models of lung toxicity
by G.L. Fisher and M.E. Placke, (Columbus, OH) 71–93

Toxicant distribution in the Thomas domes
by R.L. Carpenter, E.C. Kimmel, C.D. Flemming and C.R. Doarn (Dayton, OH) 95–108

Managing data quality through automation
by R.W. O'Connor and A.K. Miller (Research Triangle Park, NC) 109–118

Inhalation exposure technology used for varying exposure models and profiles in toxicology studies
by B. Adkins Jr. (Research Triangle Park, NC) 119–133

Toxicological interactions between carbon monoxide and carbon dioxide
by B.C. Levin, M. Paabo, J.L. Gurman, S.E. Harris and E. Braun (Gaithersburg, MD) 135–164

Effects of irritant gases on avoidance/escape performance and respiratory response of the baboon
by H.L. Kaplan (San Antonio, TX) 165–179

Regulatory aspects of fire toxicology
by G.L. Nelson, (Hattiesburg, MS) 181–199

Poster Abstracts 203–234

A comparison of the binding and distribution of benzo[*a*]pyrene in human and rat serum **(Human serum binds more benzo[*a*]pyrene than rat serum because of its higher lipoprotein level)**
by K. Aarstad, R. Toftgård and O.G. Nilsen (Trondheim, Norway and Huddinge, Sweden) 235–245

Ion transport and cadmium-induced inhibition of ciliary activity and induction of swelling of epithelial cells in mouse trachea organ culture **(Cadmium acetate seems to induce cellular swelling by indirectly interacting with calmodulin)**
by M. Låg and K. Helgeland, (Oslo, Norway) 247–258

Toxicity of 7,12-dimethylbenz[*a*]anthracene and 7-hydroxymethyl-12-methylbenz[*a*]anthracene and its prevention in cultured rat adrenal cells. Evidence for a peroxidation mechanism of action **(Polycyclic hydrocarbon toxicity in cultured adrenal cell depends on cytochrome *P*-450 and generation of active oxygen species)**
by E. Hallberg and J. Rydström (Stockholm, Sweden) 259–275

The covalent binding of cyclosporin A to rat liver macromolecules in vivo and in vitro: The role of cytochrome *P*-450 **(Cyclosporin A is metabolically activated by cytochrome *P*-450 before binding to DNA)**
by J.F. Nagelkerke, R.B. Tijdens, E.P. Schwarz, M.F.G. Winters, L.C. Paul and G.J. Mulder (Leiden, The Netherlands) 277–284

Selective inhibition of bipyridyl-stimulated NADPH oxidation by ascorbic acid **(Protection against bipyridyl-mediated NADPH oxidation in microsomes is dependent upon simultaneous presence of specific MFO substrates)**
by L. Zychlinski, P. Raska-Emery and M.R. Montgomery (Tampa, FL) 285–294

Inhalation toxicity of acetaldehyde in rats. IV. Progression and regression of nasal lesions after discontinuation of exposure **(Damaged olfactory epithelium regenerates from basal cells)**
by R.A. Woutersen and V.J. Feron (Zeist, The Netherlands) 295–305

A comparison of the effects of cisplatin and *N*-methyliminodiacetato-(1,2-diaminocyclohexane)-platinum(II) on renal function and gentamicin excretion in rats **(Repeated injections of MIDP do not affect renal function or gentamycin excretion)**
by M.S. Engineer, D.-H.W. Ho, A.R. Khokhar, R.A. Newman and R.E. Bulger (Houston, TX) 307–315

Ontogenic variation in acute lethality of cadmium in C57BL/6J mice **(LD_{50} and survival time following exposure to Cd increases with age)**
by D.J. Thomas, R.A. Winchurch and P.C. Huang (Omaha, NE and Baltimore, MD) 317–323

Histochemical and biochemical observations on the cytotoxicity of paracetamol and its effects on glycogen metabolism in rat liver **(Paracetamol paradoxically leads to an increase in glycogen in liver cells)**
by M.A. Jepson, M.J.H. Davis, A.A. Horton and D.G. Walker (Birmingham, U.K.) ... 325–337

The effect of sodium aurothiomalate (myochrysin) on the distribution of calcium, magnesium, copper, zinc and iron in the rat **(Gold seems to cause a redistribution of copper from serum to the kidney where it may be bound to a specific protein)**
by A. Taylor, L.J. King and V. Marks (Guildford, Surrey,) 339–350

Copper-induced lipid peroxidation and hemolysis in whole blood: Evidence for a lack of correlation **(Copper ions decrease GSH and increase methemoglobin but this and hemolysis seem not to be related to lipoperoxidation)**
by A. Piriou, C. Tallineau, S. Chahboun, R. Pontcharraud and O. Guillard (Poitiers, France) 351–361
